DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11/18/02 has been entered.

Claim Objections

2. Claim 20 is objected to because of the following informalities: "said magnitude" on line 1 lacks antecedent basis and it appears that "said magnitude" should be changed to --said charging amount--. Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claim 19 is rejected under 35 U.S.C. 102(b) as being anticipated by Monson et al. (USP 4,785,019).

With respect to claim 19, Figure 2 of the Monson et al. reference disclose a source follower circuit, which meets a method of reducing an attenuation of an input signal (12) to a junction field effect transistor (Q1), the method comprising controlling a charging amount of a parasitic capacitance by changing the input signal (i.e., it is inherent that every field effect

Art Unit: 2816

transistor has parasitic capacitance, and when the input at the gate of n-channel JFET Q1 is changing from low to high, the parasitic at the gate of JFET Q1 will be charging to turn JFET Q1 on).

Allowable Subject Matter

5. Claims 11-14 and 16-18 are allowed.

Claim 11 is allowed because applicant argument that the prior art of record fails to disclose or suggest the limitation "an output terminal of said source follower circuit is connected to said island region" is found persuasive.

Claims 12-14 and 16-28 are allowed because they depend on claim 11.

6. Claim 20 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim 20 would be allowed because the prior art of record fails to disclose or suggest the limitation "connecting an output terminal of said source follower circuit to an island region disposed between said pad and a semiconductor substrate".

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
